Language: ReliaEn in English or in Thai

Menu: File ▸ Language…

Part 1 — What the function does

What it does. ReliaEn speaks English or Thai: the menus, the forms, the messages and the reports. File ▸ Language… chooses the language for the whole application. The choice is stored at once and takes effect when ReliaEn next starts, so nothing changes under your hands while work is open; ReliaEn offers to restart at once.

The Language dialog

- ① Language: the list with English and ไทย (Thai). Each choice is written in its own language, so the way back can always be found.
- ② Buddhist-Era dates (พ.ศ.): the date display of the open CMMS file; available only while a CMMS file is open.
- ③ The note: The language applies to the whole app — the menus and the analysis forms change when ReliaEn next starts. Buddhist-Era dates apply to the open CMMS file.
- ④ OK: stores the choice.
- ⑤ Cancel: closes the dialog; nothing changes.

What changes with the language	What does not
Menus, tabs, forms, buttons, messages, report text	Numbers, units, file names, column names you typed, the digits of every result

From which data. The setting of this ReliaEn on this computer, one for the whole application.

When an engineer uses it. When the computer is used by people who read Thai, or when a report is to be made in the other language.

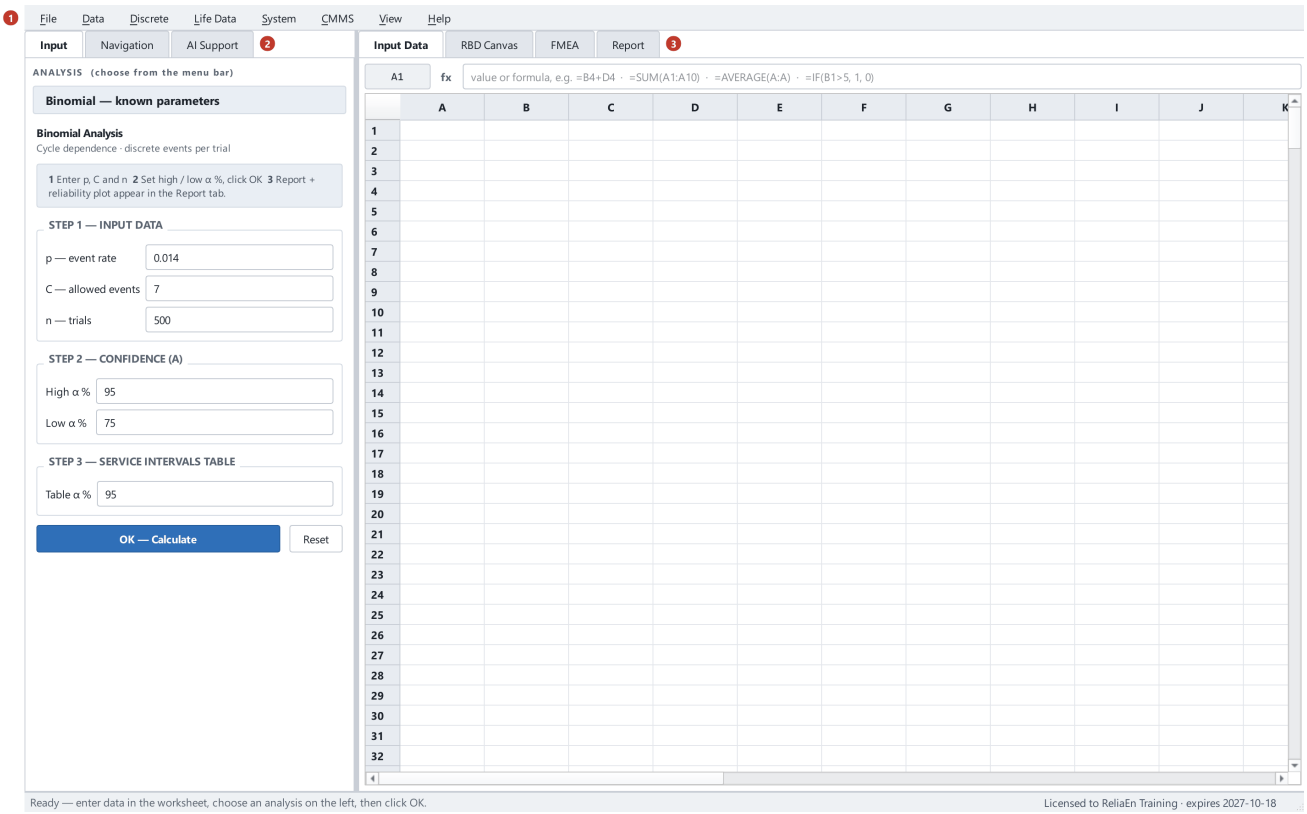

When not to use it.

Situation	Use instead
Only the dates of a CMMS file should read in the Buddhist Era	The Buddhist-Era dates (พ.ศ.) tick in the same dialog, with that CMMS file open
A report already calculated is wanted in the other language	Calculate it again after the restart: a report keeps the language it was calculated in

Part 2 — The example's input data

Setting. A reliability engineer sets up ReliaEn on a planning-office computer for planners who prefer Thai. The engineer switches the language before handing the computer over, and keeps the own session in English until the work is saved.

Input	Value
The running language	English
A CMMS file open	none
The new language	ไทย (Thai)

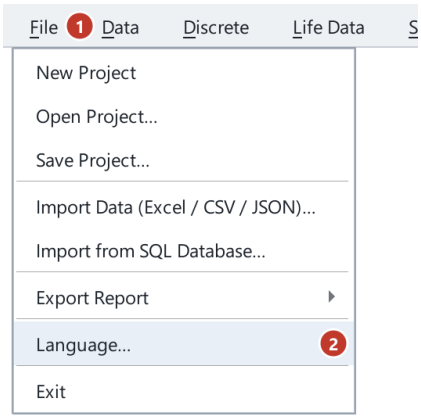

ReliaEn running in English

- ① The menu bar in English: File, Data, Discrete, Life Data, System, CMMS, View, Help.
- ② The left tabs.
- ③ The main tabs.

Part 3 — How to use it, step by step

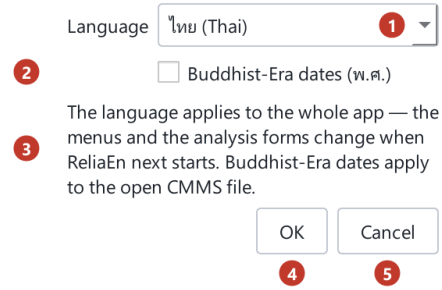

1. **Choose File ▸ Language….**

Step 1 — the menu path

- ① File: the menu.
- ② Language…: the entry to click.

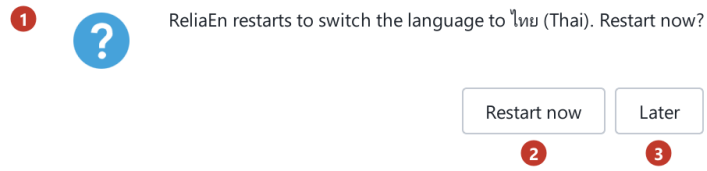

2. **Choose ไทย (Thai) in the list and click OK.** The tick for Buddhist-Era dates is unavailable, because no CMMS file is open.

Step 2 — the other language chosen

- ① The list: ไทย (Thai) chosen.
- ② Buddhist-Era dates (พ.ศ.): the date display of the open CMMS file; available only while a CMMS file is open.
- ③ The note: The language applies to the whole app — the menus and the analysis forms change when ReliaEn next starts. Buddhist-Era dates apply to the open CMMS file.
- ④ OK: the button to click.
- ⑤ Cancel: closes the dialog; nothing changes.

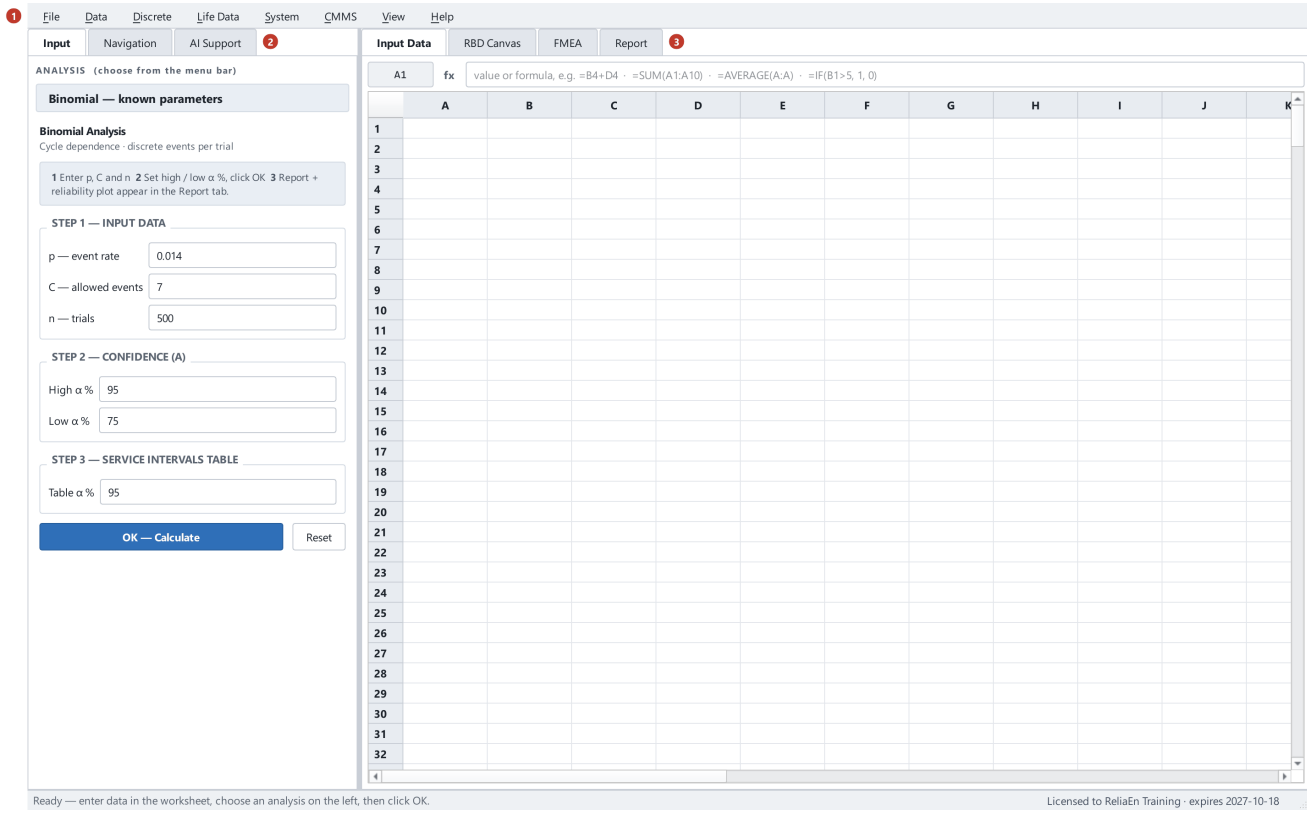

3. **Read the question and click Later.** Restart now would first ask about unsaved work, as File ▸ Exit does, and then start ReliaEn again in Thai.

Step 3 — the restart question

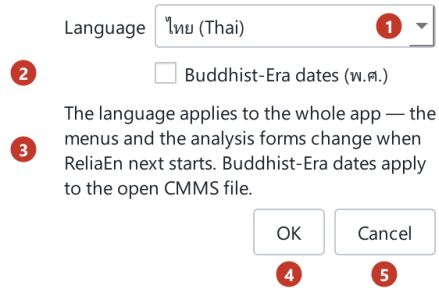

- ① The question, in the running language: ReliaEn restarts to switch the language to ไทย (Thai). Restart now?
- ② Restart now.
- ③ Later: the button to click.

Part 4 — The result

The window after Later

- ① to ③ The menu bar and the tabs are still in English: this session keeps its language.

File ▸ Language… opened again

- ① The list shows ไทย (Thai): the stored choice. The dialog around it is still in English.
- ② Buddhist-Era dates (พ.ศ.): the date display of the open CMMS file; available only while a CMMS file is open.
- ③ The note: The language applies to the whole app — the menus and the analysis forms change when ReliaEn next starts. Buddhist-Era dates apply to the open CMMS file.
- ④ OK: stores the choice.
- ⑤ Cancel: closes the dialog; nothing changes.

When ReliaEn next starts, it opens in Thai.

Part 5 — How to interpret the results

Stored now, applied at the next start. OK stored ไทย (Thai) at once; the running session stays English until it ends. The next start reads the setting and opens in Thai: the menu bar reads ไฟล์, ข้อมูล, ไม่ต่อเนื่อง, ข้อมูลอายุ, ระบบ, CMMS, มุมมอง, วิธีใช้, and the menu titles keep the English shortcut letters, so Alt+F still opens the File menu.

The way back. In the Thai ReliaEn the same dialog is the entry ภาษา… of the menu ไฟล์; the list still reads English and ไทย (Thai), so a reader of no Thai finds English there.

The numbers are the same. A report calculated in Thai prints the same digits as the English one; only the words change. Names you typed - column names, file names - are never translated.

Restart now. It asks about unsaved changes first, exactly as File ▸ Exit does, and Cancel there means the same as Later. ReliaEn then starts again, reopens the open CMMS file, and closes the old window.
